

SUNRISE ENTERPRISES

COMPANY PROFILE • 2026

Power Infrastructure Built to Carry the Load.

BIS approved manufacturer of EEL-2 distribution transformers — repair, testing, commissioning and AMC services from our works in Sindri, Dhanbad, Jharkhand.

MSME
Govt. of India

ISO 14001:2015
Environmental Mgmt.

BIS Approved
IS 2026 Tested

BEE 4 Star
Energy Rated

About Sunrise Enterprises

Sunrise Enterprises was founded in 2018 by P. K. Singh, an electrical engineering graduate of BIT Sindri, after more than thirty years spent commissioning high-voltage switchyards and running power distribution for thermal plants, rolling mills, sponge iron units and pellet plants.

That field background shaped a deliberately small, hands-on setup: an SSI unit built beside B.I.T Sindri with its own winding, drying and testing lines, staffed by career transformer engineers and a younger team of mechanical engineers who keep the manufacturing floor running.

Rather than scale into a generic supplier, the firm has stayed focused on one thing — distribution transformers, built or rebuilt correctly the first time, with the paperwork and testing to prove it.

FIRM SNAPSHOT

Founded	2018
Location	Sindri, Dhanbad
Entity Type	Partnership
Reg. No.	396/2018

500 KVA
MANUFACTURED

2000 KVA
REPAIRED

2.5 MVA
OVEN CAPACITY

7 Ton
LOADING BAY

Vision & Mission

MISSION

Respond fast, quote accurately, and deliver transformers that don't come back for the wrong reasons.

VISION

To be the transformer partner industrial buyers call first — for a new unit, a rebuild, or a switchgear panel — because the last one held up.

WHAT GUIDES US

Precision

Tested to IS 2026, every time.

Accountability

Registered, GST-compliant, traceable.

Responsiveness

Field service without delay.

Craft

Career transformer engineers.

Manufactured, Repaired, Tested

MANUFACTURING

EEL-2 Distribution Transformer

BIS-approved, up to 500 KVA, built to IS 2026.

REPAIR

Transformer Repair & Rewinding

12-stage rebuild process, up to 2000 KVA.

PANELS

LT Control Panel

Low-tension control and distribution panels.

PANELS

PCC Panel

Power Control Center for feeder control.

PANELS

MCC Panel

Motor Control Center for industrial loads.

PANELS

DG Panel

Diesel-generator standby power control.

PANELS

APFC Panel

Automatic power-factor correction.

PANELS

Transformer Testing Panel

Infrastructure behind our DVDF/HV test bay.

PANELS

DVDF Panel

Dynamic voltage-drop acceptance testing.

Manufacturing Facility

Manufacturing

- 7-tonne loading/unloading bay, direct road access
- Semi-automatic HV & LV winding machines
- PID-controlled drying oven, rated to 2.5 MVA
- High-vacuum oil filtration plant
- Dedicated transformer oil storage tank
- Full tooling & tackle inventory

Testing

- Power analyzer
- Automatic turns-ratio meter
- DVDF & HV test panel
- 5 KV insulation resistance tester
- Micro-ohm meter
- BDV tester, clamp meter, true RMS multimeter

The Repair Process — Tank to Test

Twelve stages, the same sequence every time, ending in full IS 2026 testing.

01	02	03	04	05	06	07	08	09	10	11	12
Detank	JVR	Rewind	Core	Insulate	Overhaul	Bushings	Tap Switch	Oil	Oven	Finish	Test

Certified, Standard by Standard

Raw materials are sourced from vetted suppliers, and every unit is tested in-house across multiple electrical parameters before it's cleared to leave the works.

IS 2026

Core manufacturing & test standard.

IS 1180 (Pt.1):2014

Level 2 energy-efficiency spec.

BEE 4 Star

Energy efficiency rating.

OHSAS 18001:2007

Occupational health & safety.

ISO 14001:2015

Environmental management.

ISO 9001:2015

Quality management system.

MSME REGISTERED

Registered under the Ministry of MSME, Government of India, with a valid Udyog Aadhaar (JH20A0023757) and GSTIN (20ADSF55547F1ZW).

Heavy Industrial Power Distribution

Our founder's three decades of project execution span these sectors — the same expertise now shapes every transformer we manufacture and repair.

- Thermal Power Plants**
Execution experience in plant-level power distribution.
- HV Switchyards**
Switchyard commissioning and distribution at high voltage.
- Rolling Mills**
Power distribution for continuous rolling-mill operations.
- Sponge Iron Plants**
Electrical distribution across sponge iron production lines.
- Pellet Plants**
Distribution project work within pellet plant facilities.

Four Reasons Buyers Come Back

01 Field-Tested Leadership

Three decades of HV switchyard and industrial power-distribution experience sit behind every design decision.

02 One Roof, Full Process

Winding, oven-drying, oil filtration and electrical testing all happen on our own floor — nothing outsourced mid-process.

03 IS 2026 Verified

Each transformer is tested against Bureau of Indian Standards parameters before it's cleared for dispatch.

04 Built to Be Rebuilt

Our 12-stage repair line means a failed unit gets a second life instead of a landfill trip.
